Nature Of Opinion:

Docket Number: WS-02987A-15-0284

Docket Position: Against

(Safety issue) Mr. Johnson and Mr. Crocket referenced distances to the standpipes at 26 miles round trip to Florence and 38 miles round trip to Apache Junction. Mr. Crocket stated that standpipe customers live in a rural area and before the J. U. standpipe found water elsewhere then, they are doing it again now. What they did not take into consideration in their statement is the "safety" factor. 8 to 12 years ago road conditions and speed limits were entirely different in Queen Creek. Our roads are much improved four lane and speed limits are higher. Motorists travel from 50 to 75 MPH on our main roads and highways now to Florence and Apache Junction. Our side streets to the Johnson Utility standpipe are 25 to 45 mph with very low local traffic. Water trailers that hold 1,000 gallons of water are in the 9,000 lb. range and become difficult to stop. We tow at 20 to 25 MPH when full. Put that on a major highway when others are traveling at 75mph. Recipe for disaster?
